HEMP, HEMP HOORAY!

If we thought that the daisy was the "Jack of all trades", hold onto your hats because the Hemp plant has just entered the arena! Did you know that in 1941, Henry Ford displayed a car that was made out of soybean, hemp and plastics; it was lighter than steel and withstood ten times the impact...without denting. Hemp is popular for home building because walls made from hemp are rot-free, pest-free, mold-free and fire-resistant and they can last up to 500 years. Hemp plastics are also completely biodegradable.

IT'S HERE!!

Introducing PBR International's newly developed cloning ball – the "DynaBall". With our South African developed and manufactured "DynaBall" air layering has become an easy and practical method of propagation for home gardeners, amateur horticulturists as well as commercial growers of horticulture, agriculture and floriculture products.

DYNAMIC DYNABALL

The DynaBall comes in two colours - green and transparent.

Our green DynaBall is UV protected, whereas the transparent ball allows for seeing the roots develop before your eyes.

Also available is our hybrid DynaBall which is half green and half transparent, the one half is UV protected and the other half provides a “window” to see when the roots have developed sufficiently for planting.

Order your DynaBalls at our very special launch price of R7.00 each (excluding VAT).

This special low price is applicable to your first order only.

MEET THE TEAM

Meet Elandre, our ever smiling and helpful co-founding director.

Elandre's primary focus areas are product development, technical advise, new product sourcing, regulatory affairs and international growth.

Elandre is the active one in the office and keeps fit by cycling and attending gym regularly.

Q & A

Q: Dear PBR International,

I am the grounds keeper of a golf course in a small town and I am having issues with our greens and fairways. They're patchy and looking very dull. Do you have anything that can help bring my grass back to life again?

A: Dear Reader,

You are in luck, because when it comes to greens and fairways, we at PBR International know a thing or two. Golf courses from around South Africa have used our DynaGro Liquid fertiliser and have seen amazing results. Our specially formulated liquid fertiliser, DynaGro, is packed with nutrients to ensure that your grass gets everything it needs to thrive. Dynagro has no animal byproducts in, which makes it odourless. This means that you can apply the product to the grass and have your guests swinging their putts soon afterwards.
