

YOUR MONTHLY EDITION OF *ROOTS 'n' SHOOTS* OCTOBER, 2021

SPRING INTO ACTION

Everywhere you look now, you will see new life developing. Trees that have shed its leaves and were standing barren during the winter months are now sprouting new shoots and leaves. Flowers are starting to bloom because of the warmer weather, and did you know that baby birds learn to sing in the springtime?

Springtime also sees the days getting longer which means very soon we will be having hot beach days. It also means that now is the perfect time to get back into your garden and get your hands dirty! We are running specials on our **Dip&Root** Liquid rooting hormone as well as on our Cultured Solutions Hydroponics range.

DIP & ROOT

Dip&Root is a liquid growth regulating hormone concentration used to stimulate fast and prolific rooting of plant cuttings.

The active ingredients are Indole-3- Butyric Acid (IBA) & Naphyl Acetic Acid (NAA).

Dip&Root is used on the more "difficult to root" plant cuttings. The two active ingredients work together to enhance the rooting of the cutting and to promote vegetative growth.

In other words, the cutting is pushed from the bottom and pulled from the top, to promote maximum growth.

Dip&Root is widely used in the fruit tree industry, forestry, rose growers & in general nurseries.

For the month of November we will be running a promotion on all **Dip&Root** sales.

- 10ml: R26.00
- 500ml: R175.00
- 1L: R340.00

WHAT'S NEW AT PBR INTERNATIONAL?

PBR International is constantly working on new and exciting things, and one of the projects that we are excited about is our partnership with the Animal Welfare Society of South Africa.

Chanelle, our Business Development Manager will also be embarking on a week long road show through the Garden Route to the Eastern Cape to meet with our clients. We will be videoing the trip, so you will be able to join her by following the trip on Social Media. If you are a client along the route expect to see Chanelle with her cameraman at your place. We have lots to share with you.

Stay tuned to our social media for more information.

Q & A

Q: Dear PBR International,

I have only ever used the **DynaRoot** rooting powder. How do I use the **Dip&Root** liquid rooting hormone?

A: Dear Reader,

Thanks for getting in touch.

Our **DynaRoot** hormone powder is our most popular product and shows great results when people use it. However, the **Dip&Root** liquid rooting hormone is a concentrated formulation that you can use on all your plants. You would just need to dilute the liquid according to the plant that you want to propagate.

Just like the powder, make sure that all your equipment are clean and sterilised.

Make a 45 degree angle cutting just under the node to make sure you have a bigger surface area for the hormone uptake. Dip it in the **Dip&Root** liquid for a few seconds and then place the cutting into your substrate.

Contact us on info@pbrtrading.com for more information.
